Re: Minor Modification
EPA UIC Permit WY21097-07392
Well: Tribal E-1
Fremont County, WY

Dear Mr. Meabon:

On November 10, 2008, the Region 8 Underground Injection Control Program (UIC) offices of the Environmental Protection Agency (EPA) received a request for approval to install 4,000' of 5 1/2" liner inside the 7" production casing. The intent of the liner is to improve the integrity of the injection well. It is our understanding that the liner will be cemented in place and the cement circulated to surface.

Effective upon the receipt of this letter, the well construction requirements in Appendix A are modified to include the installation of the 5 1/2" liner, cemented to surface. Please be reminded that it is the responsibility of the owner/operator to be aware of, and to comply with, all conditions of the Permit and relevant modifications as issued. This includes providing a cement bond log and results from the Standard Annulus Pressure test after the completion of the liner installation, as required in Appendix B of the Permit.

If you have any questions regarding this Minor Modification, please call Wendy Cheung of my staff at (303) 312-6242. Future questions regarding other Permit requirements and submission of the results of the logging and testing requirements should be directed to Linda Bowling at (303) 312-6254.

Sincerely,

Stephen S. Tuber
